TPM Biotech Sdn Bhd is targeting to achieve a 30% business growth in the short-and-medium term of within the next two to five years through a wider and aggressive domestic and regional outreach programme.

Participating among the thousands of participating companies at the three-day BioMalaysia and Asia Pacific BioEconomy Exhibition 2017 (BioMalaysia 2017), TPM Biotech is showcasing its signature brand of Herbs Garden Garcinia Plus, Herbs Garden Penia and Herbs Garden Smilax Plus herbal-based products.

TPM Biotech head, Puan Ema Ukhtiah Zakaria said by adopting a more aggressive approach towards reaching out domestically and regionally it would enable her company to help create greater awareness and accelerate the growth of entrepreneurs in the biotechnology sector.

"As a key enabler of the Malaysian biotechnology sector, it remains pertinent for TPM Biotech to assist the grassroots community in seizing the abundant multi-billion ringgit business opportunities offered by the herbal-based industry starting from the raw material stage to the finished products.

"The outlook for herbal-based biotechnology products continuously remains strong at both local and global markets level. It is for this reason that we want to strengthen and sustain our foothold in the market by promoting our Herbs Gardens range of products at BioMalaysia 2017.

"We are confident this exhibition will give us an opportunity to reach out to a wider audience target both domestically and regionally. It will also provide the necessary platform to promote the wide range of internationally benchmarked facilities and services that TPM Biotech has to offer existing and potential enterprises in biotechnology," she added.

The TPM Biotech Herbs Garden range of products is locally manufactured at its factory in Raub, Pahang. The facility is fully equipped with machinery and equipment capable of offering contract manufacturing to small and medium-sized enterprises.

"Working closely with our customers, we assist biopreneurs by offering advisory and counselling, incubation facilities and services, commercialisation of products, contract manufacturing and also developing strategies to maximise their return on investment.

"Customers can be assured of the highest product quality as commitment to excellence, international practices and processes, and stringent quality controls in meeting highest level of international standards have always been our forte.

"Another distinct advantage of TPM Biotech is its highly advanced science laboratory which is equipped with the latest technologies for halal analysis and verification," said Ema.
